**Norwegian Patent Application No. 20140317 - Institutt for Energiteknikk, Nordic Mining ASA**

We refer to Office action issued May 27, 2015, in which Examiner points out that the claimed process shows support only for precipitation of *calcium* carbonate and should be limited accordingly.

Please find amended text, description and claims, where Examiner's assertion is complied with. There are two versions of the text, one clean and one annotated.

We will file Norwegian translation of the application in the near future.

Kind Regards

Per Berg
