Dear All,

We have looked on your patent in regard to what membranteknikk a.s have done in this field of marine byproducts.

Membranteknikk was contacted by Rasmus Gundersen (AGIA) in 2002 with challenges within the fish meal business. From there on we have performed tests on stick water, pump water and blood water from marine industry. Our application have been the use of UF and NF technology to achieve the wanted end result.

In 2004 we presented our process and technology on a IFFO seminar on Iceland (please find attached program). This seminar was held from 28 April to the second of May. Here we presented a layout involving UF separation and NF separation of stick water.

We are still offering this process as published in April 2004.

Med vennlig hilsen/Best regards

Odd Henning Sirnes

Manager Sale/R&D/Cand. Scient.

We thank you for the prompt response from AGIA, but we cannot see any response from Membranteknikk within the time limit set to 21.January.

We kindly ask you to respond latest by Monday 25.1.2010 so we can proceed in an adequate manner.

Sincerely yours/Vennlig hilsen

Dear Sirs,

We have been made aware of advertising by your companies; Membranteknikk AS and AGIA which we believe is AGIA ENGINEERING AND CONSULTING Rasmus Gundersen ENK. We will make you aware of our patents in the field of your advertizing that e.g. refers to the use of UF+NF for desalination, nitrogen removal and improvement of product quality in stick water.

Our patent is international accepted e.g. in Norway No 320964 and PCT 2005/000172 –see enclosure.

We ask you to explain how your process and products in this field relates to our patents and look forward to hear from you ASAP and latest by 21. January 2010, remaining

PS: We have for the sake of good order copied Zacco our patent attorney of this mail.

For Norcape Biotechnology AS
Sincerely yours/Vennlig hilsen
