Enclosed is a translation of the patent claims in Norwegian. Please note that as per the Norwegian Patents Acts, section 66i the patent will receive protection in Norway only as far as there is agreement between the translation and the language of the application/patent granted at the EPO. In matters concerning the validity of the patent, language of the application/patent granted at the EPO will be used as the basis for the decision. The patent documents published by the EPO are available through Espacenet (<http://worldwide.espacenet.com>) or via the search engine on our website here: <https://search.patentstyret.no/>

PATENTKRAV

1. Et stangavleddet Cone Viability Factor Long isoform (RdCVFL) polynukleotid eller
polypeptid for bruk i en metode for behandling av aldersrelatert makulær

5 degenerasjon (AMD) i et individ som trenger dette, ved å redusere malondialdehyd
(MDA) nivået i netthinnen.

10 2. RdCVFL-polynukleotid for anvendelse ifølge krav 1, hvor RdCVFL
polynukleotidsekvensen er assosiert med elementer som muliggjør regulering av dens
ekspresjon.

15 3. RdCVFL-polynukleotid for anvendelse ifølge krav 2, hvor elementene som muliggjør
regulering av dets ekspresjon omfatter en promotorsekvens.

4. RdCVFL-polynukleotid for anvendelse ifølge krav 1, hvor RdCVFL
polynukleotidsekvensen er i form av en vektor.

5. RdCVFL-polynukleotid for anvendelse ifølge krav 4, hvor vektoren er en AAV-vektor.

20 6. RdCVFL-polynukleotid eller polypeptid for anvendelse ifølge krav 1, hvor RdCVFL-
polynukleotid eller polypeptid blir levert i en farmasøytisk akseptabel oftalmisk bærer.
